Worksheet A: Wonder, Explanation, Method

Name: _____ Date: _____

Task 1: Sorting hypotheses

in class, small groups, 20 min.

Copy the explanations from the board into the table. Assign each one to a stage and, for each explanation, name an observation that would *refute* it. The three stages: *wonder* (your own model does not fit), *explanation* (a hypothesis, not yet evaluated), *method* (a procedure that decides between hypotheses).

Statement / explanation	Stage	What would refute it?

Task 2: Observing two conditions

in class, individual work

The experiment is repeated in class under two changed conditions.

1. For each condition, note what was changed and what you observed.
2. Which of your explanations from Task 1 does this support, and which does it weaken?
